HARDWARIO Wins a Prestigious Competition and Secures a Number of New Contracts

HARDWARIO a.s. (PX:HWIO.PR) announces the following news.

Winning a Prestigious Competition

HARDWARIO successfully participated in the prestigious Volkswagen Company of the Year 2024 competition, winning in the Liberec region and becoming a finalist in the national round. The victory brought HARDWARIO significant media coverage and a number of new contacts.

Building on a Successful Contract

HARDWARIO completed the contract with GrainLink and delivered all contracted CHESTER GrainLink systems. The success of the cooperation is demonstrated by GrainLink's announcement of an order for 500 more systems, which is expected to take place in the first quarter of 2025.

With CHESTER GrainLink, key grain storage parameters can be monitored in real time. Using temperature and humidity sensors installed across the silo, the total volume of stored grain can be accurately determined. All the data collected is sent to the HARDWARIO Cloud middleware service and then analyzed and visualized in the GrainLink web app, where farmers get an overview of the exact state of their stocks. CHESTER GrainLink thus provides a sophisticated solution for monitoring and managing stored grain.

CHESTER GrainLink is designed for efficient installation and, thanks to LTE-M technology via mobile operator networks, communicates reliably even to remote locations. The product is rated for temperatures from -20 to +60 °C, is field-proven down to -40 °C, and can be powered from various sources, including solar panels that recharge the backup batteries for continuous operation.

Pharmaceutical Monitoring With STICKER

In several renowned hospitals, the miniature HARDWARIO STICKER sensor has been put into practice thanks to a collaboration with partner O.K. SERVIS BioPro. This advanced product is powered by two AA batteries. In the Prague Central Military Hospital, in the clinics of the Canadian Medical network in the Czech Republic, and in Agel medical facilities in Slovakia, STICKER monitors refrigeration facilities where, for example, vaccines are stored.

Advanced Probe Against Dangerous Radon

HARDWARIO has the long-term goal of improving the conditions for life on Earth. Radon, a radioactive gas, is a major hazard in buildings. HARDWARIO has established a cooperation with the Czech company PIKETRONIC, which is the supplier of the probe. The probe has a precision sensor based on a semiconductor photodetector, and the cooperation has given rise to the product CHESTER Radon. Thanks to the bus used, up to 32 probes can be connected to a single CHESTER, which allows monitoring of large areas.

About HARDWARIO

HARDWARIO a.s. is a purely Czech technology company focused on IoT, or the Internet of Things. It provides its customers with configurable IoT devices, connectivity, and cloud services. Together with its partners, it successfully implements IoT projects in manufacturing, energy, agriculture, retail, healthcare, and asset management. Since 2022, the company has been listed on the Prague Stock Exchange, START market (symbol HWIO.PR).
